STUDENTOS / PRIORITY BECOMES A PLAN

Try StudentOS Live — Build Your Next Week

Put the important work into a week you can actually use.

A week is a capacity decision.

Start with fixed commitments and real available time. Then choose what deserves a place.

01

Decide

Name the nearest important deadline or learning need.

→

02

Place

Assign a small, concrete task to an available block.

→

03

Protect

Keep space for rest, changes, and unfinished work.

→

04

Review

Check evidence and decide what to change next.

Give every task a clear status.

Must happen

A consequential deadline or prerequisite for this week.

Can move

Useful work that fits only after the essentials.

Can wait

A real priority for later, deliberately kept out of this week.

FICTIONAL EXAMPLE / FOUR 30-MINUTE BLOCKS

School first. SAT stays in motion.

A Friday chemistry quiz is the nearest deadline. Place chemistry recall on Monday, SAT algebra on Tuesday, fresh chemistry problems on Thursday, and a review of evidence and next steps on Sunday. The plan uses two hours; adding another task means moving or shrinking something.

BUILD YOUR OWN NEXT WEEK

Place the work. Protect the week.

Use broad priorities and available time. Keep private student details out of a public demonstration.

01	**Start with reality**	Fixed commitments / available blocks: _____
02	**Choose one priority**	The most useful outcome this week: _____
03	**Make it actionable**	Task + day + time limit: _____
04	**Choose what waits**	I am deliberately postponing: _____

Review question: What evidence would make us keep, change, or stop this plan?

THE STUDENTOS LENS

PRIORITY	ACTION	EVIDENCE	FAMILY SIGNAL
What matters first, and why	Tasks that fit available time	What got done; what changed	A concise update, plus a next step

Framework view · not a product screenshot or individual assessment.

Make the next step useful.
