PARENT WORKSHOP / FROM COMPLETION TO EVIDENCE

Is Your Student Actually Learning?

Look beyond completed work. Ask what the student can explain, retrieve, and use.

Completion is a useful signal. It is not the whole story.

A finished assignment tells you work was submitted. A learning check asks what the student can do next.

01

Explain

Can the student describe the idea in their own words?

→

02

Retrieve

Can they recall it without the notes in front of them?

→

03

Transfer

Can they use it on a fresh task with a different surface?

→

04

Recheck

Does it still hold after time has passed?

Ask for a signal you can act on.

What mattered?

Which skill, deadline, or decision was the priority?

What changed?

What fresh work shows progress or a remaining gap?

What happens next?

Continue, adjust the task, or ask for human help?

FICTIONAL EXAMPLE / LEARNING CHECK

“Finished” becomes “show me the thinking.”

A student completes a set of ratio questions with a worked example nearby. Later, they solve a fresh ratio problem without the example and explain why the setup fits. If the explanation breaks down, the next task targets that step — not another entire worksheet by default.

A FIVE-MINUTE FAMILY CHECK-IN

Get the signal. Choose the next move.

Keep the conversation calm and specific. One piece of work can be more useful than a long status report.

01	**Let the student lead**	“Show me one thing you understand better now.”
02	**Look at fresh evidence**	“What could you do without the example or notes?”
03	**Find the next step**	“What needs another try, and what can wait?”
04	**Decide on help**	“What have you tried? Where would support help?”

Bring in human judgment when the same gap persists or the plan no longer fits.

THE STUDENTOS LENS

PRIORITY	ACTION	EVIDENCE	FAMILY SIGNAL
The most useful learning focus	A task with clear boundaries	A fresh check of understanding	What changed; where help matters

Framework view · not a product screenshot or individual assessment.

Make the next step useful.
